

stomach – A baglike organ in which food is mixed with digestive juices and squeezed by muscles

The stomach is a small bag much like a balloon.

Test Fact:

The stomach “mashes” the food then mixes it with acid.

Draw a picture

stomach

liver – A large organ that makes a digestive juice called bile

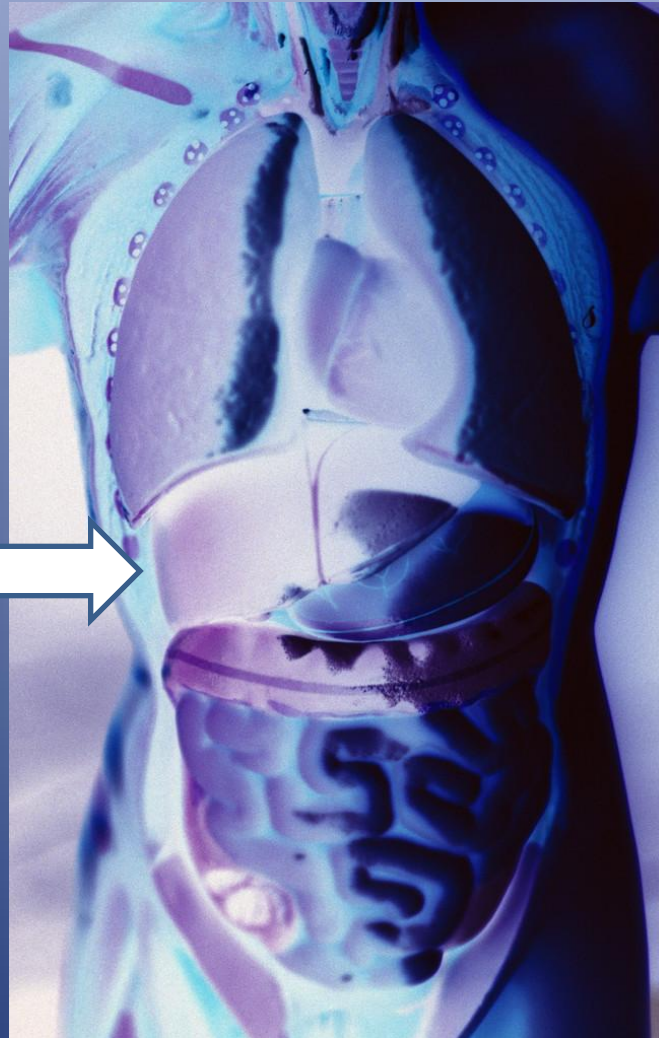

The liver breaks down large blobs of fat.

Focus Test Fact:

The liver cleans the blood coming from the digestive organs.

Draw a picture

liver

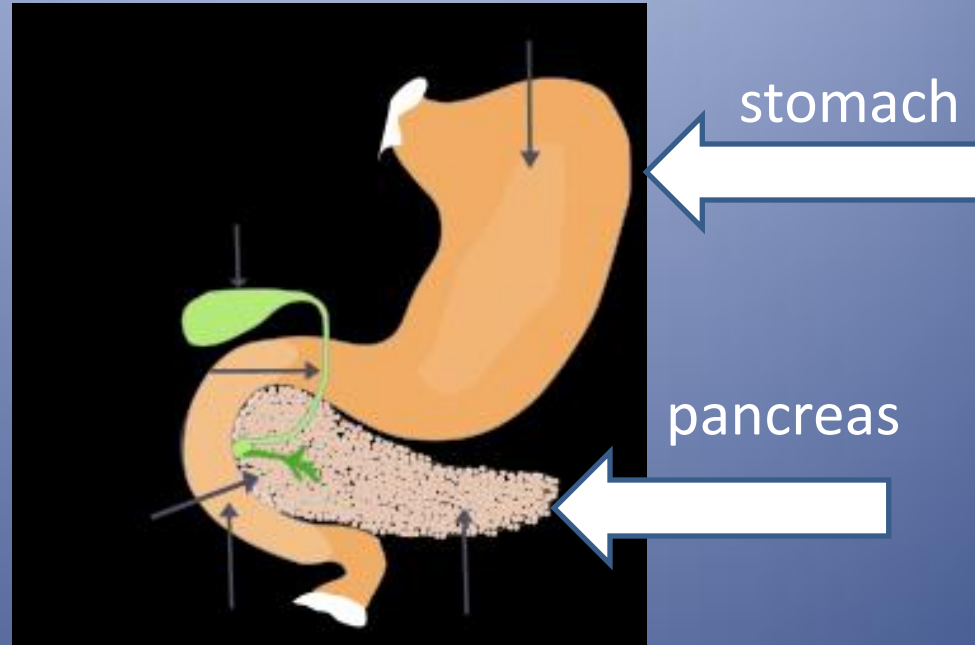

pancreas – An organ that makes a digestive juice and insulin

The pancreas creates juices to break down fats and proteins.

Focus Test Fact:

The pancreas helps with digestion by secreting enzymes to process sugars.

Draw a picture

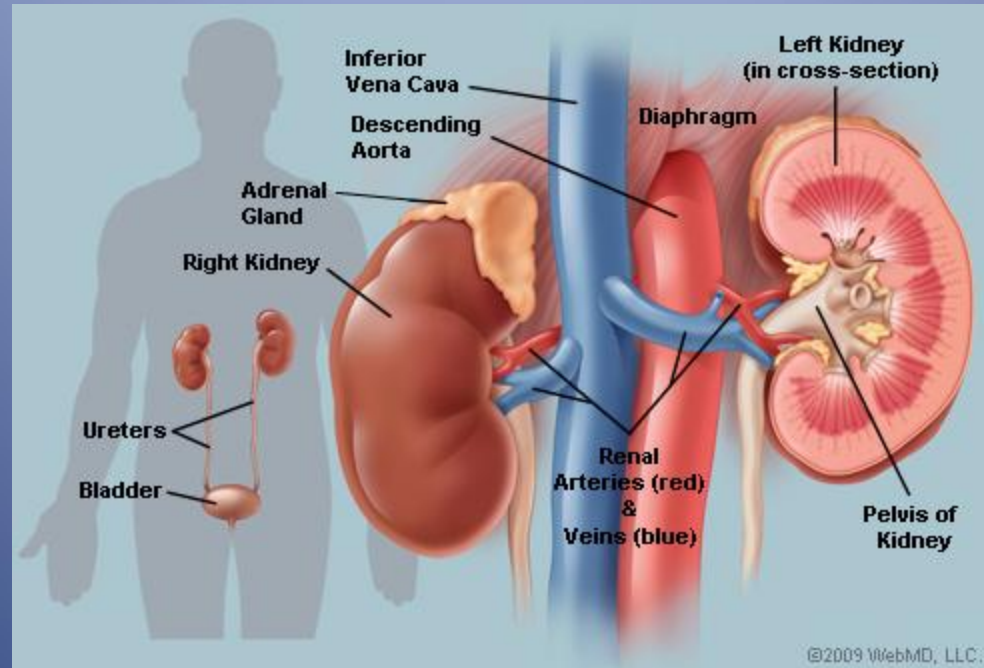

kidneys – Organs in the human excretory system that remove waste materials from the blood

The urinary system filters the blood and gets rid of the body wastes as urine.

Focus Test Fact:

Kidneys help balance the salts and acids in the body by filtering blood.

Draw a picture

bladder – Organ in the excretory system that stores and releases urine

The bladder can stretch like a balloon.

Test Fact:

The urinary system regulates fluid levels in the body.
